Overview

Education 695 is designed to serve as a first introduction to the design and practice of educational research.

Goals

The course readings and lectures will examine fundamental issues of research design and practice from a variety of methodological perspectives — qualitative, experimental, and non-experimental multivariate methods. Upon completion of this course you will be able to:

- Appreciate the complexity of the issues that are faced by educational researchers, and understand how different methodological traditions approach these issues;
- Critically evaluate research literature and evaluate the evidence on which generalizations are made in the published literature; and,
- Use appropriate reasoning to synthesize a body of literature.

We will, by necessity, use some basic math along the way in order to better understand the statistical concepts we will be studying, but please note that our primary focus will be on developing a conceptual understanding of qualitative and quantitative research methods.

Since educational research is usually a group activity, we will emphasize group work during the course. You will be encouraged to collaborate during and outside of class periods on course projects described in detail below.

Readings

There are a few required texts for this class:

A book I recommend (but did not order due to its availability) is the most current publication manual of the American Psychological Association. If you do not already have a copy, consider purchasing it as a general writing resource for all of your classes. Any assigned readings and materials not included in the basic texts will be available on reserve at the Undergraduate Library or posted on Canvas.
Course requirements

All assigned readings need to be completed before class on the assigned date, and should be brought to class for reference. Likewise, students should submit other assignments before the beginning of class unless the instructor gives other specific instruction.

I expect students to participate actively in class, including attending class and contributing thoughtfully to conversations on a regular basis. Much of the value of the class comes from the contribution of the students in it. If you miss a class, please contact a class member to ask what material or discussion you missed.

You will be asked to provide two critical reviews of published articles in your area of interest. The first of these will be based on research conducted with qualitative methods, while the second will be a review of a statistical piece of research. You will need to send an electronic copy of the article with your review.

The final course activity will be a literature review paper of 15-20 pages using research analysis skills learned in this course. The intent is that this assignment be done in groups of three or four students; we will discuss group formation during class as the time approaches. Each group will make a short oral presentation on the group’s review efforts at the end of the term.

In addition to completing a research paper, each student will review a draft literature review written by another group and provide suggestions for improvement. Each group will make decisions on final paper revisions to address the suggestions of these reviews. These reviews will count toward the reviewer’s grade for each project, but will not have any impact on the grade of the paper being reviewed.

All written assignments must be typed, edited for spelling and grammar, and formatted in APA style. We will make an exception for long quotes, which should be single-spaced. Please use double spacing, one-inch margins, and a 12-point font. Students should submit all assignments through Canvas unless otherwise indicated by the instructor.

The Sweetland Writing Center is an excellent resource if you confront any dilemmas when writing papers. Do take advantage of this center, but make contact early – this resource is popular.

Integrity

Academic honesty is essential to this class, both to conduct our conversations and study do and to have faith that research we will discuss and analyze was crafted with integrity. I encourage you to read your rights and responsibilities as a student. Information on these topics is at: http://bit.ly/umintegrity

Diversity

I intend to present materials and activities that are respectful of our diverse world and I encourage you to provide suggestions on how we can incorporate new materials to improve the course for all students. The University of Michigan has a strong commitment to diversity; you can gain some of the background at: http://www.diversity.umich.edu

Accommodation

If you think you need an accommodation for a disability, please let me know at your earliest convenience. Some aspects of this course, the assignments, the in-class activities, and the way the course is usually taught may be modified to facilitate your participation and progress. As soon as you make me aware of your needs, we can work with the Office of Services for Students with Disabilities (SSD) to help us determine appropriate academic accommodations. SSD (734-763-3000; ssd.umich.edu) typically recommends accommodation through a Verified Individualized Services and Accommodations (VISA) form. Any information you provide is private and confidential and will be treated as such.
Assessment and Evaluation

For the purpose of assigning grades, student performance will be evaluated as follows:

1. **Class participation — 1/6 of course grade**
   Criteria for this include regular attendance in class, preparation to participate in the day’s discussion, focused participation that goes beyond a regurgitation of the information, and respectful engagement with classmates during discussion.

2. **Critiques of published research — 1/3 of course grade**
   You will be expected to provide a critical evaluation of an article published after December 2012 that is not otherwise assigned for this course. The article should be a research study, not a literature review or conceptual essay. The article should focus on college students and be from one of the following journals:

   - Research in Higher Education
   - Journal of Higher Education
   - Review of Higher Education
   - Journal of College Student Development
   - Journal of Student Affairs Research and Practice

   As you critique this article, areas to emphasize include:
   - **Literature Review:** What are the main theoretical frameworks used? Are they compatible with the research question? Would other theoretical frameworks be more useful?
   - **Research methods:** What is the research question? What subquestions exist? What research method was used to address these questions?
   - **Results:** Highlight the most compelling findings in the results. You can use graphical depictions (tables, figures, charts) to make this easier to describe. What interested you, and why?
   - **Discussion:** What are the important points discussed? What implications for further research or for practice do you see here? Does this address the research question and the theoretical framework described earlier in the article? Is this a credible part of the ongoing research-based conversation about this topic?

   Students will submit two critiques of published research: One critique of qualitative research, and one critique of quantitative research. Each critique will be 5-7 pages long.

3. **Literature review paper — 1/3 of course grade**
   Groups will create a literature review, which classmates will peer review in full draft format before its final submission. This

GSI

We have a great GSI this semester. Feel free to contact him as well with questions about your writing and work.

Page limits?

Where page limits are given, those are both minimum page expectations and maximum page limits. The final grade for a project will be reduced if the paper falls outside of this range.

Milestones

**October 3 at 9 am**
GROUP: Research issue and initial citation list for literature review
INDIVIDUAL: Critique of qualitative research paper

**October 30 at 9 am**
Complete draft of literature review, distributed to instructor and to peer reviewers

**November 6 at 3 pm**
Review of draft literature review, distributed to instructor and to authors

**November 21 at 9 am**
Critique of quantitative research paper

**December 5 at 9 am**
Final literature review; Class presentations

**December 12 at 9 am**
Group project peer review; Class presentations
paper will require analysis of research literature surrounding a particular higher education issue. The format of these projects will be that of conference presentations or short research articles that appear in scholarly journals. The format of the final written products should conform to the standards in the American Psychological Association publication manual. Two thirds of this grade will be given for the paper, and one third for the accompanying class presentation by the group.

4. **Review of literature review paper — 1/6 of course grade**

Each student will review a paper written by another student and provide suggestions for improvement. These reviews will count toward the reviewer’s grade, but will not have any impact on the grade of the person being reviewed. This review should be 5-7 pages.

### Tentative Course Schedule

<table>
<thead>
<tr>
<th>Date</th>
<th>Topics</th>
<th>Readings (Chapters)</th>
</tr>
